b
δp = 0
Similar programme mixtures across cells
δp = 3
Different programmes dominate different cells
δp increases
cell 1
cell 2
cell 3
cell 1
cell 2
cell 3
all cells belong to the same declared population G
programme 1
programme 2
programme 3
Between cells
variation in programme usage across cells
Within cells
diversity of programme usage in each cell
Programme $\Delta_G^{(P)}$ (bits)
